## NFC | RFID

## Data theft without card theft

Smartcards work with RFID (Radio-Frequency Identification) or NFC (Near Field Communication) wireless technology.

Data can be exchanged between sender (card) and recipient (reader) - without any physical contact.

With simple readers data thieves can read personal numbers and other data from cards over distances of several meters.

The theft remains completely unnoticed - until the next card statement.

The TROIKA CardSaver® is a data safe that securely protects cards with sensitive information from illegal RFID skimming.

We rely on TÜV-tested Crystalloy technology - a thin high-tech film that ensures efficient NFC and RFID shielding.

# Men's gifts

## Is it really better to give than receive?

At TROIKA, we love great design. Our products are often unusual and original, always well designed, and above all - never boring. Great design has become a signature of TROIKA products. That is exactly what you can expect in our men's gifts category: small and large objects that people love to have around because they brighten up everyday. Developed in the TROIKA Design Werkstatt or by renowned designers and often the recipients of famous design awards.
